

**IT'S NOT EASY!** Best way is to use the documentation, preferably with computer-aided search. You know how much you know about the job. We know how much you know about the equipment. —not because it's best in performance, but for service, spares and reliability. Don't take the word of a salesman. Ask the 30 General Motors Superintendents (and other people) who use them. Better still, ask for a demonstration—on, (not for) a demonstration—available on request.
