GTX-3336
Deluxe AM 23 channel
transceiver featuring built-in
range boost modulation,
Automatic Noise Control,
and Modulation Indicator
\$39

GTX-3325
Deluxe SSB/AM 23 channel
transceiver featuring built-in
range boost modulation, P.E.T.
RF amplifier for high receiver
sensitivity, Noise Blanker, AGC,
gain control and large 5-meter,
12 watt PEP SSB, 1 watt AM.
\$159

Gemtronic GTX-3336 AM and GTX-3325 AM/SSB 1977

GEMTRONIC GTX-2325 SSB

The professionally
designed GTX-2325 is a
transceiver employing a
frequency synthesizer cir-
cuit to provide 23 crystal controlled transmit and receive chan-
nels in the 27 MHz Citizens Band. This unit is an all solid state
unit making use of IC, P.E.T. transistor and diode, and is a com-
pact and high capacity transceiver. The GTX-2325 can be
operated over all 23 channels in the conventional AM mode, or
in suppressed carrier single Side Band using either the upper
or lower sideband as desired giving further 46 channels.
